

# Fuel Tax Credits Cash is king

**Fuel Tax Credits represent an \$8 billion government program but are you claiming your full entitlement? Now is the time to make sure you are not leaving money on the table and enhance your cashflow.**

Fuel Tax makes up approximately one-third the cost of fuel, so maximising your Fuel Tax Credit claims is a smart way of keeping your operating costs down.

Any business using material amounts of fuel in their business should consider whether Fuel Tax Credits can be maximised.

In our experience, many fuel users are either unaware they can claim, or if they are already claiming, are often under-claiming.

We partner with our clients to maximise their Fuel Tax Credit entitlements – at this time cash is most definitely King!

We have had success in assisting many clients save material amounts of money where fuel is used as part of their business, in particular in the following industries:

- Transport & logistics
- Manufacturing
- Construction
- Contractors
- Mining
- Energy & resources
- Civil engineering/contracting
- Agriculture, horticulture
- Infrastructure
- Earthmoving
